Cosmetic Dentistry

What is Cosmetic Dentistry?

Cosmetic Dentistry is a term generally used to describe dental work that aims to improve one’s appearance. Cosmetic dentistry leaves patients with a renewed feeling of confidence and boosts their self-esteem.

Types of Procedures

Veneers and teeth whitening are usually the first procedures to come to a patient’s mind when hearing the term “Cosmetic Dentistry.” However, Cosmetic Dentistry encompasses a variety of different procedures. No two patients are exactly alike; therefore, it is important to keep in mind that more than one procedure may be necessary for optimum results. A list of Cosmetic Procedures includes

- Teeth Whitening
- Veneers
- Dental Implants
- Dentures
- Orthodontics
- Bonding
- Crowns/Onlays
- Tooth Contouring/Reshaping
- Gum Lift
Procedure Fees

At Plaza Health Dentistry we strive to perform an exceptionally high quality of dentistry, but don't think that we’re insensitive to dental health costs; to the contrary, we routinely create treatment plans that scale down treatment costs by 50% or more obtained from other dental offices. We employ multiple strategies to keep fees reasonable for our patients. It’s not “my-way-or-the-highway” at Plaza Health. We sincerely understand that the individual needs and desires of patients can be vastly different. We value communication and education. We pride ourselves on being creative and flexible to solve financial, treatment, and scheduling concerns.

The first step towards a beautiful smile
